

## **CNRS Tenure Track Position**

**Établissement/organisme porteur :** CNRS

**Établissements/organismes partenaires envisagés :** PSL, Paris Cité, Strasbourg, Paris 1 Panthéon Sorbonne

**Laboratoires d'accueil envisagés :** LAS, PJSE, SAGE, LADYSS, BETA, ISJPS

**Nom du projet :** Earth's Livability and Fair Transitions

**Acronyme :** TERRHATAJ

**Mots-clés :** Livability, climate change, global crisis, inequalities, transferability, fair transition

**Durée visée :** 4 ans

**Profile :** Holder of a doctorate or equivalent diploma or proof of titles and scientific work deemed equivalent by the competent body of the establishment.

There is no restriction on the age or nationality of applicants

All CNRS positions are accessible to people with disabilities, with special arrangements for tests made necessary by the nature of the disability

**Thématique scientifique :** global change and human societies

**Section (s) CNU/CoNRS/CNAP correspondante (s) :** CNU : 2-4-5-17-19-20-23/ CoNRS : 35-36-37-38-39

**IR/TGIR/SNO impliqué (préciser si EquipEx+ impliqué) :**

### **Stratégie d'établissement :**

This profile relates to the new thematic priority of the Institute for Humanities and Social Sciences Humanities and social sciences institute on the challenges of the earth's livability and fair transitions. Its recruitment will contribute to offer a humanities and social sciences based answer to some of the scientific challenges of the CNRS COP: specifically health-environment, territories of the future, climate change, energy transition ([https://www.cnrs.fr/sites/default/files/download-file/COP\\_CNRS1\\_0.pdf](https://www.cnrs.fr/sites/default/files/download-file/COP_CNRS1_0.pdf)). Its recruitment will contribute to the development of excellent disciplinary research, a condition for quality interdisciplinary dialogue within these COPs and other areas of interdisciplinary collaboration.

Furthermore, by focusing on the issue of fair transitions, this profile is likely to contribute to the CNRS Africa roadmap, as it can be applied to research on the development of living standards and democracy in different regions of the world, particularly on the African continent.

### **Stratégies des laboratoires d'accueil :**

The potential host laboratories come from several humanities and social sciences disciplines: law, sociology, philosophy, anthropology, economics. They have been chosen according to: a) their openness to the theme and b) their inclusion in an academic context conducive to interdisciplinary dialogue on the issues of the earth's livability and faire transition. Finally, they are co-supervised by

institutions with which the Humanities and social sciences institute wishes to develop special relationships in this field of research.

**Résumé du projet scientifique :**

The project will aim at developing basic knowledge on how societies respond to the global challenges posed by climate change, environmental transitions and biodiversity loss. Several needs have been identified: the laureate will contribute to the development of research capable of describing, characterising and evaluating the way in which societies perceive environmental crises and their global dimension, recognise and constitute them as a problem to be dealt with or not, and link them to other issues (population movements, poverty, natural disasters, modes of production and forms of mobility, etc.). The project will allow for a reflexive distance from the discourses that circulate in the social space and the public debate, whether optimistic or pessimistic, utopian or dystopian, or even declinist and catastrophist. Finally, the project will also be able to pay particular attention to the issues of inequality and therefore of fair transitions, of the development of sustainable economies, on a double environmental and social level, and on a national or global scale.

**Résumé du projet d'enseignement/observation :**

The teaching program will be discussed according to the research centre where the laureate will be affiliated.  
He/she will be involved in the existing teaching programs.

**Synthèse financière :**

320 K Euros for the project

**Scientific dissemination:**

The dissemination of the results will be done through world-class scientific productions: publications, patents, software... In addition, the results will be communicated to various targets such as scientific communities, media, decision makers, general public, schools, etc., with an adapted calendar. Specific tools may be developed such as websites, newsletters, meetings, international symposia, summer schools and conferences.

**Open science :**

The CNRS is developing a strong policy in favour of open science ([https://www.science-ouverte.cnrs.fr/wp-content/uploads/2019/11/CNRS\\_Roadmap\\_Open\\_Science\\_18nov2019.pdf](https://www.science-ouverte.cnrs.fr/wp-content/uploads/2019/11/CNRS_Roadmap_Open_Science_18nov2019.pdf)). Open science aims at making research results "as accessible as possible and closed as necessary". As such, the CNRS intends to make 100% of the scientific production elaborated in its research centres accessible, in particular through its deposit in HAL. The data produced must also be made available and reusable, unless there are specific restrictions. In addition, the guidelines for individual evaluation have been revised in accordance with the DORA declaration, to be more qualitative and to take into account all facets of the researcher's profession.

**Science and society :**

The relationship between science and society is now recognised as an integral dimension of scientific activity.

The project will develop this dimension in synergy with all its partners. The resulting research work will help to inform public decision-making. Participatory science initiatives may be initiated with actors from the project's socio-economic and cultural ecosystem.

**Indicators:**

The evaluation will be based on criteria used by the National Committee for Scientific Research (CoNRS). The activity will be evaluated on the basis of scientific production in terms of high-level publications and communications, on institutional and private partnerships formalized by contracts, on international presence, on transfer towards multidisciplinary scientific communities, and on scientific dissemination to non-specialist audiences.

**Deadline for submitting the application :** August 31, 2022 3:00 p.m. (Paris time)

**Link to the application form :** <https://emploi.cnrs.fr/OffresCPJ.aspx>
